SUMMARY

Business Analyst and Product Owner with four years in software delivery for financial services: capitalization, insurance, private pension and banking. I connect business, regulatory and executive goals to engineering teams across the full SDLC: discovery, requirements, backlog, refinement, testing, UAT and release. Experienced in integration-heavy landscapes where REST APIs, BFF layers and AWS services meet Mainframe/COBOL core systems. A hands-on background as a low-code developer (Pega, Innoveo, Blip) means I write specifications developers can build from. Five years as a teacher before tech shaped how I explain complex rules and facilitate groups. Fluent English (EF SET C2). I use AI assistants daily to speed up analysis, documentation and prototyping, with human review of everything that ships.

CORE SKILLS

Business analysis	Requirements elicitation, business rules, process and journey mapping, gap and impact analysis, stakeholder management
Product ownership	Backlog management and prioritization, user stories and acceptance criteria, refinement, MVP definition, UAT and release readiness, Scrum ceremonies
Technical	REST APIs, JSON payload mapping, BFF, Mainframe/COBOL integration, AWS (EC2), Docker, Git/GitHub, AI agents and MCP (personal projects)
Tools & platforms	Jira, Azure DevOps, Octane, Figma, Miro, Pega Platform, Innoveo, Blip
Domains	Capitalization, insurance, private pension, investment funds, banking, regulatory compliance, LGPD

EXPERIENCE

GFT Technologies · Business Analyst / Product Owner — Jan 2026 – Present · Remote

Current project: financial institution, capitalization sector

- Business analyst for regulatory and digital transformation demands, working with multiple stakeholders across parallel workstreams.
- Regulatory delivery, such as Resolution 12 (Núclea): turn each requirement into functional specifications, user stories and acceptance criteria, and assess its impact on core systems.
- Daily partner of a squad of Java back-end and Mainframe COBOL developers: refinement, business-rule clarification, integration points and removal of blockers.
- Align priorities and scope between business areas and IT so every workstream has a clear, testable backlog.

Previous project: insurance and private pension (BVP)

- **Broker portal (bancassurance):** requirements and user stories for the pension simulator, validated with Adobe XD prototypes, in Scrum teams planning by program increments (PIs).
- **Fund Comparator:** functional and technical specification to integrate SmartBrain APIs into the Portal Gestor, replacing the legacy Quantum system. Led refinement of BFF routines and front-end components for returns, volatility charts and Sharpe-ratio matrices.
- **Self-service parametrization:** requirements and UI specification so business teams configure SmartBrain data loads and parameters themselves, with no manual IT tickets.
- **Mainframe decoupling:** designed the functional change that lets customers create pension goals without a mandatory linked certificate, removing a transactional bottleneck in the Mainframe and unifying journeys.
- **Backlog and documentation** in Jira and Azure DevOps: user stories, business-rule diagrams, JSON payload mapping and acceptance criteria for squads in Angular, Java, AWS and COBOL.
- **Quality:** test scenarios in Octane, business UAT and support for safe production releases.

GFT Technologies · Pega Business Architect, Product Owner & System Architect — Jun 2024 – Dec 2025

- **Data center lifecycle workflow (FEL-1 to FEL-5), Pega Constellation:** as Product Owner and System Architect, mapped 222 business processes in 15 days, built the epic/feature/story hierarchy in Azure DevOps, delivered 200 story points in 4 sprints and led hypercare, prioritizing 70 change requests after go-live. Replaced e-mail with one traceable platform.
- **Internal service portal for a bank** (PO, Scrum Master, UX): Configure → Build → Run workflow orchestrating Jira, CI/CD, DBT and change management, with SLAs, rule-based routing, reports and JSON export to the bank's GCP. Weekly status workshops with stakeholders.
- **Telecom self-service portal** (PO, business architect, UX): personas and story maps for customers, sales and regulatory auditors; Lead-to-Cash with Salesforce/SAP integration; Troubleshoot-to-Resolve triage; audit reports served from GCP.

- **Wholesale credit application for a bank:** Figma prototypes and detailed Jira user stories; adopted generative AI to speed up story writing.
- **Bank insurance on Pega 8.7 (System Architect):** case lifecycles, data pages, Cosmos UI, decision tables and trees for policy eligibility, unit tests and guardrails.

SIS Innov & Tech · Business Analyst & Low-code Developer Oct 2022 – May 2024

- **Pension simulator modernization:** as Product Owner and Scrum Master, and hands-on builder, migrated a critical production simulator (Angular, Java, Mainframe) to Innoveo with full business-rule parity, using technical pension spreadsheets and high-fidelity Figma prototypes.
- Delivered a competitive life insurance MVP in under two weeks on Innoveo, validating market hypotheses fast.
- **Blip:** led the accreditation of the consultancy as an official Blip partner, then migrated a client's chatbot from Zenvia to Blip as PO, Scrum Master and developer: regex validation, rule-based routing, SLAs for human handoff, usage tracking for reports and client onboarding material.
- Technical Product Owner for a high-concurrency simulation platform: Docker containers on AWS EC2 with automated build, rebuild and restart pipelines versioned on GitHub.

Federal District Department of Education (SEEDF) · Portuguese Language & Literature Teacher Jan 2018 – Sep 2022

- Taught and facilitated diverse groups, including Colégio Militar Tiradentes and the Novos Caminhos program: mediation, negotiation and clear communication of complex content.
- Planned in iterations guided by continuous assessment data, the same habits I bring to sprints, backlogs and agile ceremonies.

SIDE PROJECTS · GITHUB.COM/T0MASLEONES

- **Ingredient Lens:** AI agent for first-pass food label compliance in Brazil, the US and the EU. The model reads; a deterministic, versioned rules engine exposed as MCP tools decides; a named person signs. 3,312 automated tests; benchmarked on 6,000 real products. t0masleones.github.io/ingredient-lens
- **Êxodo Urbano:** 2D game in TypeScript (Phaser + Capacitor) for web, Android and iOS. Local-first, privacy by design (LGPD), tested security rules and CI.

EDUCATION

- **MBA, Artificial Intelligence for Business** · Faculdade Senac DF · 2026 – 2027 (in progress)
- **Technology Degree in Systems Analysis and Development** · Estácio · 2024
- **B.A. in Portuguese Language and Literature** · University of Brasília (UnB) · 2019
- **Entrepreneurship and Global Leadership** · The George Washington University, Washington, DC · 2014 · fully funded scholarship, one-month program
- **English Language and Culture** · Centro Interescolar de Línguas (CIL) · 2007 – 2014

CERTIFICATIONS

- Certified Pega Business Architect (PCBA)
- Innoveo Business Architect · Innoveo Business Analyst
- Microsoft Azure Fundamentals (AZ-900)
- Microsoft Azure AI Fundamentals (AI-900)
- Scrum Foundation Professional Certification (SFPC)
- Blip Partner · Introduction to Cybersecurity

LANGUAGES

- **Portuguese:** native
- **English:** fluent, EF SET C2 Proficient
